

# Department of Urology

The UC Irvine Health Department of Urology is home to a distinguished group of surgeons with comprehensive training in the treatment of complex urologic diseases and disorders. Their expertise includes the use of the latest modalities in minimally invasive, laparoscopic and robotic surgeries.

*U.S. News & World Report* has recognized our urology program seven times as one of the top 50 specialty providers in the country. As internationally recognized leaders, our physicians have pioneered innovative techniques and specially designed equipment used in surgery worldwide today, and continue to support research and advancement of the latest technology.

As part of our mission to provide an excellent patient experience, we offer private consultations, laboratory tests, biopsies and minor surgical procedures in our office at UC Irvine Medical Center.

In addition to providing advanced medical care, we are dedicated to partnering with the community. We offer several educational programs for high school and college students, and each physician serves as faculty educators at the UC Irvine School of Medicine.

We are dedicated to partnering with our community colleagues in order to deliver world-class care. We provide access to a referral concierge who will facilitate every step of the referral process. We ensure that your patients are scheduled in a timely manner, with the goal of returning your patients to your practice upon completion of treatment.

# Physicians

## Thomas E. Ahlering, MD
